

GALACTIC ALIGNMENT 2010

Total Lunar Eclipse Winter Solstice Dec 21st

By Ken Wright

The total lunar eclipse on the Winter Solstice of 2010, is going to be the next major shift in human consciousness. It could be more important than the Winter Solstice event of 2012. It is a deciding watershed for the direction humanity wishes itself to take into the future.

On December 21, 2012 the Mayan sacred calendar comes to an end on the winter solstice. There is much talk and focus upon this event. It has even reached mainstream news media having been focused through the lens of Hollywood. It has become a cultish topic for water cooler discussion for most while being a serious earth-changing astrological event for others. Catastrophists and transhumanists argue the event's significance.

However, what many have forgot or never knew is that the 2012 event is but a stepping-stone in a series of events that began with the Harmonic Convergence in 1987. If any still doubt that change does follow from these events be reminded that following the Harmonic Convergence, Poland had its revolution, the Berlin Wall came down, the Soviet Union began its collapse, Apartheid ended in South Africa, The New Age movement picked up speed, and the computer age was beginning in earnest, all these world changing events happening around the same time. The Harmonic Convergence, if nothing else, marked a shift in the pace of human change. Change sped up. It continues to speed up, and is about to shift again to even faster rates of societal change.

The series of events stretching from The Harmonic Convergence to the "end of history" in 2012 has often involved solar eclipses. However, lunar eclipses of significance should also have been included in the progression of these events. In particular one such lunar eclipse is of the outmost importance. This one occurs on the all vital Winter Solstice date not in 2012, but in 2010. This eclipse of the moon could be of even greater significance than the 2012 event itself.

The 2012 event has now been described to us as being a kind of Galactic Alignment between our sun and solar system with the core of our Milky Way galaxy which is known to contain a highly energetic and large black hole as do all spiral galaxies it now seems. Perhaps as the solar system crosses the galactic equator, which is what the alignment is all about, there may be some kind of burst of energy or gravity wave, or torsion wave or something that is to broadside the solar system and earth in particular that blasts out from the galactic core and is strongest on the level of the galactic equator. That's the current theory anyway. It could be correct. The alignment itself also has to do with the cycle of the Precession of Equinoxes which slowly moves the star-date of the actual Spring Equinox through the entire circle of the Zodiac.

We arbitrarily set this date at around March 21st each year, making it happen in the sign of Ares, just to stabilize the calendar. However, it is actually somewhere near the end of the Sign of Pisces and about to launch into the Age of Aquarius. This precession cycle takes somewhere between 25,920 to 26,000 years to come full circle, both numbers being often given. The sun takes 72 years to pass through one degree of this cycle. Astrological alignments are precise within one degree of exact transit or movement through a point or crossroads in the sky map. Therefore the galactic alignment is actually a 72 year span of time. The cross-point between the solar system's orbital path around the galaxy and the galactic equator occurs on the Winter Solstice. As such the exact midpoint of this crossing or alignment occurred in 1998. The 2012 alignment event has already happened and is still happening until the year 2034. If 1998 was its midpoint than 36 years earlier in 1962 is when it began. It was another shifting time in human consciousness then. It was the birth of flower power and the hippie generation, and just one year before the assassination of President Kennedy. The Beatles were also about to blossom into a cultural event. The Harmonic Convergence was just the next main phase in this ongoing galactic alignment phase shift for humanity.

The lunar eclipse of 2010 on the Winter Solstice is going to mark the next major shift in human consciousness. Just what it will indicate or usher in is up to us to decide. The polarization of humanity has sky rocketed since September 11, 2001: East versus West, fundamentalism versus mediocrity, rich versus poor. At the same time boundaries are getting fuzzier and fuzzier. For instance the new arch rivals the United States and China are economically so interlinked that the definition of "rival" no longer fits the realities of the day. Left wing and right wing politics are no longer clearly defined. Options are open. Old definitions are failing. New opportunities along with new scientific possibilities are appearing almost daily. The future is open-ended. That's the good news. The downside is that people are turning ever more into sheep, and staying asleep at the switch. We are becoming overwhelmed by the speed of so-called progress such that we are unable to question its outcomes, unable to find the proper ethical choices. This dormancy of consciousness is our greatest current enemy. The only way forward to positive decision making necessitates a wake-up call to get us motivated for our own spiritual advancement once again. The lunar eclipse on the Winter Solstice is the watershed point where we must choose to stay asleep or wakeup once and for all.

The wakeup call must be one of our own making. It comes from within us, not from some celestial event. That is why it is so important to get into a meditative or contemplative state during this Winter Solstice lunar eclipse. How we want to live our future depends upon us looking within to find our own truth. The truth that lies there is one that speaks to the higher good and community of humanity finding solutions to our problems, not further wars and dissensions and oppressions, but harmony and equality and most importantly freedom of choice. To see that, our dark-side must be brought into the light. The lunar eclipse emphasizes this darkness within and gives us an opportunity to clarify it and cleanse it from our system. At the

same time it allows us to see our inner gifts and life purpose, the very things we have forgotten we possess while we have been sleeping with our eyes wide shut.

Should you choose to focus during this lunar eclipse in meditation or prayer upon these issues, here is what the focus should also include. You can set your will and intent to create a better world, a more awake humanity, a more compassionate humanity, a greater equality yet diversity and in general an abundance, abundance of goodwill, abundance of love, abundance of wealth, health, and happiness. As you intend these things fill them up with your love and best wishes, then **amplify the effect with all of you positive emotions and feelings**. It is important to focus outward in service to the planet and humanity as a whole and not dwell on your own personal issues. Send your own stuff a call for clarification and cleansing, but move on and outward to the issues of abundance for all.

Finally and most importantly, as you finish with your requests and creative intentions, you must be willing to release them to universal mind, or consciousness, or god, whatever high powers may be out there – and then forget about what you wished for. You can't personally fulfill such grandiose wishes so don't bother dwelling upon them. Just know that your effort and energy instilled into them will be used in the most effective ways by those high powers to do what needs to be done to make it all happen. End with a strongly heartfelt release using your own words and thoughts stating something like this: "I do now let go of these things for the abundance and goodness of All. May the forces for most positive transformation do with this as they will. With my warmest thanks please make it so." And then let it go and go have a party or read a book or cook a meal or hug your spouse or a tree or your dog. Just do something that feels good and let the powers that be do their thing. Or, if it's not over yet, you could even finish watching the lunar eclipse.

Some further details on the Winter Solstice total lunar eclipse of 2010

The Mayans who have their sacred calendar ending in 2012 are also big on tracking the movements of the planet Venus. It so happens that about every 243 years Venus crosses the face of the sun, called officially a transit, but is a kind of eclipse. It just isn't big enough to black out the sun from our view. In fact, we wouldn't even notice the event without a telescope set up. This transit of Venus then repeats 8 years later, before it waits that 243 year or so cycle to come around again. It last happened in 2004 and will happen again in 2012.

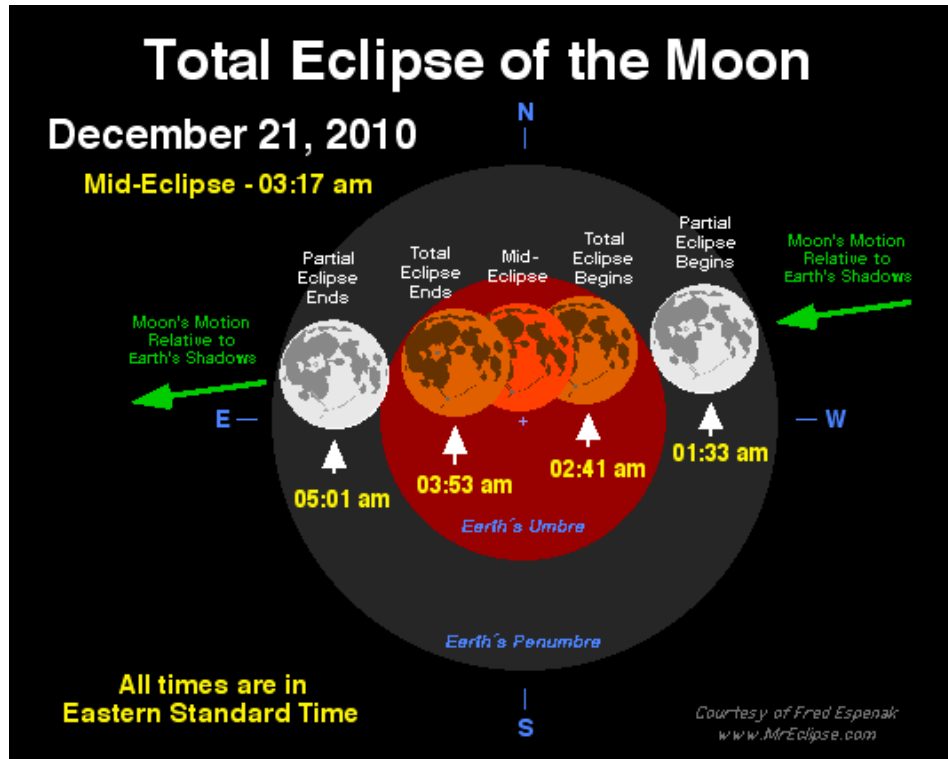

With its 2012 connection the 2004 Venus transit was used to try some experiments to see if there was any actual effects caused by these transits and by extrapolation any such alignments. A tuning fork from an expensive watch was used for a test. It vibrates at a set frequency normally, but was surprisingly found to create spikes in its output during the Venus transit. It

turned out that there were four energetic points to the transit alignment: when the leading edge of Venus aligned with the edge of the sun; when the exiting edge of Venus finished crossing the sun's edge and was totally upon the face of the sun; the same two points on the other side of the sun's disk as Venus was leaving the alignment; the contact of Venus's leading edge with the sun's edge, while still upon its face, and the exiting edge of Venus's as it fully left the sun's disk. The last contact point also produced the largest spike in that tuning fork. While all four points were important as well as the mid-point when Venus crossed the center line of the sun's disk, by far the most important point was the last. It created a significant larger effect upon the tuning fork.

The tuning fork, being electromagnetic in nature suggests that these effects are not just physical in nature, but can affect consciousness as well. The tuning fork has the same kind of magnetic setup and resonance as does the magnetite known to be inside the pineal gland of animals like migrating birds and dolphins and whales. All these species have been known to go off course, like when whales beach themselves. The reason, it is not believed, is because of electromagnetic changes in the local magnetic field the animals are flying or swimming through. It messes up their natural GPS locating system. Humans have these same magnetics in our pineal gland, also. So what effects might geo-magnetic shifts cause in our consciousness. What might alignments that spike the electro-magnetic output of a tuning fork cause in us?

Following on this speculation it might be at the very least interesting to conduct any meditation or prayer sessions you choose to do during the lunar eclipse at the moments of these same four contact points. Your intention and will for positive change could be enhanced with your own inner energy spikes at these points. The fourth and last contact point is the one where you should set your intention for that release and letting go. It could give extra "voltage" to your send-off into the universal consciousness or however you perceive it for yourself.

So, here are those contact points during this Winter Solstice lunar eclipse, should you want to use them in this way. They are given in Universal Time (UT, Greenwich Mean Time, GMT, same thing) and Eastern Standard Time. Adjust the times according to your time zone.

A lunar eclipse occurs in two stages. As the Earth aligns in the middle between the sun and moon, it is the Earth's shadow that appears to eclipse the moon. There are two kinds of Earth shadow. There is the full dark shadow that produces totality in the eclipse and is the earth's solid body's shadow. This creates contact points similar to those of a Venus Transit. This dark shadow is called the *umbra* (means shadow). Because the Earth also has an atmosphere, a shell of gases enveloping the Earth's solid body, the sun's rays diffract through it to spread out into a secondary shadow behind the planet, not quite as dark, which also crosses the moon at some additional contact points. This lighter diffusion shadow is called the *penumbra*. When the moon is in the penumbra it slowly turns a blood red color. During totality in the umbra, it appears dark red or brown, almost black. Thus, for the full lunar eclipse there are more than four of these transiting contact points along with the mid-point or full eclipse for a total of 7 points to "play" with, should you want to see how it effects your meditations, intentions, or prayers.

<u>Contact Point</u>	<u>Universal Time UT</u>	<u>Eastern Standard Time EST</u>
	December 21 st , 2010	
1 penumbral begins (leading edge starts eclipse)	5:29:17 a.m.	12:29:17 a.m.
2 partial begins (leading edge contacts umbra)	6:32:37 a.m.	1:32:37 a. m.
3 total begins (trailing edge enters full eclipse in umbra)	7:40:47 a.m.	2:40:47 a. m.
4 mid-point (totality)	8:16:57 a. m.	3:16:57 a. m.
5 total ends (leading edge exits umbra)	8:53:08 a. m.	3:53:08 a. m.
6 partial ends (trailing edge leaves umbra)	10:01:20 a. m.	5:01:20 a. m.
7 penumbral ends (trailing edge leaves eclipse)	11:04:31 a. m.	6:04:31 a. m.

NOTE: totality (contact points 3,4,5) lasts 72 minutes (approximately). Oddly it takes 72 years for the sun to pass through one degree of the Zodiac in the Precession of the Equinoxes, which sets up the 2012 event when it aligns with the galactic equator upon the Winter Solstice.

The entire eclipse is 333.31 minutes. .33331 is the sin of 19.47 degrees which is the location on any sphere, including the Earth or moon, where the apex points of a tetrahedron (a three point pyramid) geometrically embedded in the sphere, touches the sphere above or below its equator. This latitude on many bodies in the solar system is where energetic anomalies occur. It is where sunspots are birthed on the sun. It is where the great dark spot lies on Neptune and the great red spot lies on Jupiter. It is where the volcanic island of Hawaii lies on the Earth.

Coincidences, yes, but highly intriguing ones.
